Art Unit: 1712

Restriction to one of the following inventions is required under 35 U.S.C. 121:

 Claims 23-30, 33-34, drawn to a method of hydrophobizing/oleophobizing an article or imparting release characteristics thereto, classified in class 428, subclass 447.

- II. Claims 31-32, drawn to a method of improving the rheological properties of a polymer dispersion or emulsion, classified in class 524, subclass 858.
- III. Claims 35-36, drawn to a method of formulating paints, classified in class 106, subclasses 287.13 and 287.28.
- IV. Claims 37-38, drawn to a method of promoting adhesion, classified in class 156, subclass 329.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions defined by groups I to IV are deemed unrelated because of the disparate effects that are to be conveyed by each method. For example, one skilled in the art would certainly not predict that a compound known to impart exemplary release characteristics would also be useful in applications that required improved adhesion as the method claims of group IV would suggest. Indeed, there would be little or no expectation that a compound that produces a low energy surface upon being polymerized could also be successfully implemented as an adhesive material. The objectives of the subject matter in the claims of Groups II and III

Art Unit: 1712

are equally dissimilar. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention in group I:

- (a) claims 23-24 are directed to a method of protecting buildings and their
- facades using a formulation containing a fluoroalkyl-functionalized silane,
- (b) claims 27-28 are directed to a method of coating glass fibers using a
- formulation containing a fluoroalkyl-functionalized silane, and
- (c) claims 29-30 are directed to a method of silanizing inorganic fillers and
- pigments using a formulation containing a fluoroalkyl-functionalized silane

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 23-24 and/or 33-34 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Application/Control Number: 09/685,341

Art Unit: 1712

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc S. Zimmer whose telephone number is 703-605-1176. The examiner can normally be reached on Monday-Friday 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Dawson can be reached on 703-308-2340. The fax phone numbers
